

Modular Adapter System

This unique adapter system expands the application range of ISCAR endmills and its HELIBALL Line. The tools are especially useful for applications that require machining in deep cavities, such as in the Die and Mold industries.

FLEXFIT is designed for all HELIBALL CR and CRF inserts.

- CR inserts include the range of 8 to 25 mm (.315 to .984").
- CRF inserts have a range of 12 to 25 mm (.472 to .984").

This system facilitates machining with large overhangs yet is economical in that one head can be used with a combination of shank options. Additionally, its CDP heads can be mounted on both metric and inch tool combinations and its milling heads can carry the respective size of both metric and inch inserts.

Interchangeable Milling Heads and Collet Chucks for Modular Shanks and Adapters
