

Short Collet Chuck ER32

This new, short holder is now available for ER32 spring and shrink collets. These new short holders provide maximum rigidity and better cutting conditions.

Among the **SHORTIN** advantages is the shortest possible overhang yet suitable for both regular and shrink collets. The short collets provide high gripping force thereby reducing cutting vibrations and improving run-out and repeatability. Each chuck is balanced to 2.5G @ 20,000 rpm, has a symmetrical design for high speed machining and is very cost effective.
